

# Pektron Advanced Quality Tools Programme

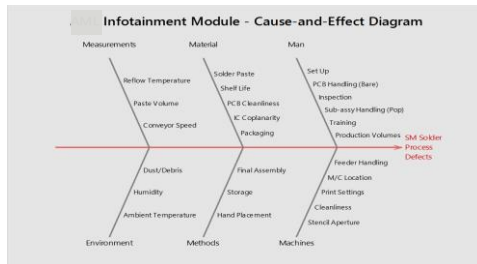

## Company Information

With 50 years of experience, Pektron is one of the largest privately owned electronics manufacturers in the world. They focus on delivering reliable and robust world-class electronic solutions to the most challenging environments.

## Requirements

Initially:

- Train a small number of people to Green Belt level
- Use Six Sigma techniques to support continual quality improvement
- Complete improvement projects across the business

## Capella Input

Delivered training in the Six Sigma tool set within the Toyota TBP framework

Provided an engaging and interactive training experience using simulation techniques and specialist statistical software

Provided project support to ensure the successful transfer of new skills into the workplace and the delivery of business benefits

On hand support and guidance in the use of Minitab software

Provided on-site and remote support for the duration of the programme

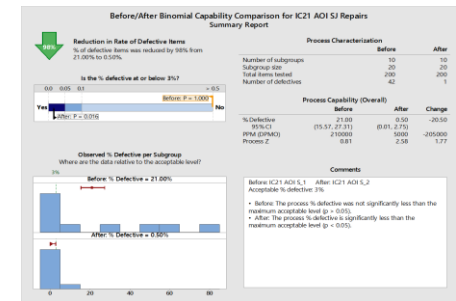

## Results

Successful completion of the knowledge element of the programme

Development of a plan to build skills and capability for a larger group at both Green and Black Belt level

Completion of projects which delivered significant benefits for the business including increase in Right First Time %

“ An extremely useful tool for solving difficult problems that are not obvious. This more structured approach means we reach an accurate conclusion much faster. ”  
Ian Harpham, Manufacturing Director

“ We were able to solve a long-running testing problem on one of our components, saving us thousands of pounds so the training has more than paid for itself. ”  
Ian Harpham, Manufacturing Director
